

## Chinet – environmentally friendly disposable cellulose tableware

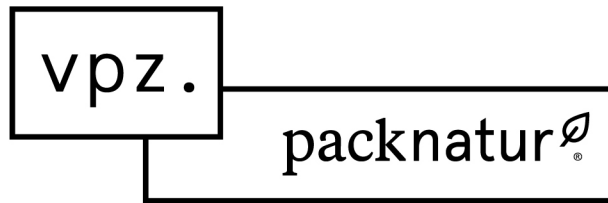

---

'Disposable' with a clear conscience

Mention disposable tableware and images of piles of rubbish often spring to mind. However, there's a way this can be avoided – with Chinet's environmentally-friendly disposable cellulose tableware.

We are fortunate to see a widespread trend towards an environmentally conscious lifestyle. We're no longer interested solely in what goes on to our plates, but also keen to know what our plates are made of. However, our concerns for the environment often stops short of the door at many events, where even the basic china plates don't get a look in. This doesn't need to be the case though. Chinet's tableware is cast from cellulose, which is obtained by recycling the side-runs (waste products) from drink carton manufacturing processes. It is fully compostable after use. This presents a particular benefit for major outdoor events because the material breaks back down into its natural components when left outside.

Chinet's tableware was put to good use at the Olympic Games in Lillehammer and the Nordic World Ski Championships in Ramsau.

As well as being environmentally friendly, the tableware is also extremely versatile. The thick, stable material also allows soup to be served and the differently shaped designs ensure that the tableware meets a diverse range of needs. Chinet's attractive products are white and printable, and can also be used safely in the microwave.

What's more, to avoid having to use a plastic spoon in a cellulose dish, we offer disposable cutlery made from poplar wood. A patented process produces ergonomic knives, forks and spoons – perfect for any occasion and, of course, fully compostable. Bon appétit!
